

# LC PRIVACY GLASS

**FOR THE HEALTHCARE INDUSTRY — INFECTION CONTROL & SWITCHABLE PRIVACY ON DEMAND**

LC Privacy Glass, an eGlass® product from Innovative Glass Corp, is an electronically-activated, switchable glazing technology that instantly changes from transparent to frosted white, creating complete privacy with just the touch of a button, by remote control, or hands-free voice command. It can be activated by the patient or hospital staff, or at a nearby nursing station.

LC Privacy Glass is easily installed into fixed or sliding walls, within partitions, and in swinging or breakaway doors typically used in ICUs and ERs. Wiring methods can range from simple door loops or electrified hinges, to proprietary integrated power transfer systems. Cleaning and sanitizing these doors is easily done with the use of disinfectant antibacterial cleansers.

Unlike curtains that provide no privacy and harbor germs that lead to cross contamination, LC Privacy Glass divider walls and doors deliver game-changing advantages, ensuring exceptional visual and enhanced audible privacy, as well as extreme infection protection.

Versatile and cost-effective, LC Privacy Glass is the perfect solution for better patient outcomes and higher patient satisfaction scores that can result in increased service reimbursements and hospital revenue.
